

# TORQUE-MAX SPANNER

The Torque-Max spanner is an alternative to chain tong spanners with the added bonus of being more reliable, harder wearing & safer to operate. Suited for heavy duty applications due to the robust design & high tensile materials used for manufacturing the spanner. The spanners are compatible with most standard breakout benches, can achieve the largest size range currently available on the market for non-chain spanners. User friendly, the torque-max range of spanners require little training, simply wrap the spanner around the hammer or drill pipe & preload the clamp with the preload bolt; when the breaking motion begins the more torque applied the higher the clamping force. Hammer maintenance is an easy task when the right tools are used and the Torque-Max is right to get the job done first time.

**TORQUE-MAX - 4-6"**  
**PRODUCT CODE - M3197-62**

**TORQUE-MAX - 8-8 HD**  
**PRODUCT CODE - M3260-62**

**CHUCK SPANNER - 6-9¼"**  
**PRODUCT CODE - M3218-64**

**CUSTOM SIZES AVAILABLE ON REQUEST**
